## Number 3 in the Evidence series, from Creation Research

The mountains north of Anchorage Alaska glow eerily under the famous northern lights. Nights are cold in Alaska, but “black diamonds” from beneath the mountains can warm even the coldest night. Coal (alias black diamond) has been mined here for the past century.

Rapidly falling night snow quickly turns trees into bizarre pillars as the Aurora flashes mysteriously across the sky. But under these present trees are petrified ones. Fossil trees reveal a once warmer Alaska and throw interesting light on Creation, Noah's Flood, and catastrophic rapid formation of sediments. They also show evidence against millions of years of evolution.

Turn the page to commence your trip across the globe - under the earth - in company with John Mackay and the Creation Research team.
