## Man or Mouse or Chicken?

Written by Administrator Thursday, 06 September 2012 05:14 - Last Updated Thursday, 06 September 2012 05:20

Are you a man or a mouse ... or a chicken? Evolutionists believe that mice and men are descended from a closer common ancestor than the one they share with birds. Therefore, human chromosomes should be more similar to mouse chromosomes than chicken chromosomes. However a recent study published in Nature vol. 402, p411, compared human, mouse and chicken chromosomes and concluded "the organisation of the human genome is closer to that of the chicken than the mouse."

[ Editorial Comment: This is not the first time comparison of different species has not fitted evolutionists' assumptions. Attempts to draw evolutionary trees based on comparing proteins and other chemicals have also failed. So, are you man enough to admit it, or just plain chicken! (Ref. bird, man, family trees)
