

LONG TERM WORKER AND FRIEND NOW WITH CHRIST.

"And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." John 17:3

IF WE NEEDED IT FRED COULD MAKE IT.

Fred often prayed "Lord be merciful to me a sinner!" Rejoice in the fact that Fred is with Christ in Glory .. not because he was good enough, but because Jesus was, and today he's having a wonderful time catching up with Daniel and Noah, and best of all ...his precious Lord Jesus. Fred was a wonderful help to this ministry and a blessed friend. We will miss him till next we meet when Jesus comes.

Below are just some of the items we reported involving Fred over the years.

Adds the last touches to a sign he erected for the living fossil forest.

2009

Erected the first mural at Jurassic Ark. With many more to follow.

2010

NEW FOSSIL TRAILER DISPLAY was completed with the help of Nathanael Ciranni, and Fred Dainty. They joined people such as Balazcs, and the Argows who have contributed to this display trailer we still use at Jurassic Ark

2014

He is in the early stages of constructing our world first stalactite machine.

2014

MAKING CEMENT TEST BLOCKS was a tedious but vital part of our experiments to show how stalactites grow. Fred never grumbled at any task no matter how lowly.

2015

HOSE HOLDING came well within his talent range as we tested and retested the strata machine we had designed and which he had to build ever bigger versions of. The results of this machine are making big impacts around the globe particularly on young geology students who have been led astray by the heresies of anti-biblical geology .

2015

TOOL MAN FRED was requested to make an exact replica of a fossil tool John Mackay found in a coal seam and test that it really was designed and functional. What was involved? Firstly finding what type of wood the tool was made from, then duplicating it and testing the 'toolability' of the result. The end product in timber at exact size is shown at left. Quite a

2015

heavy duty hitter or pounder of some description ... definitely human and well designed.

So yes there are human tools in allegedly millions of years of old coal seams. That's why there will be a tribute to Fred and his work in our final museum display section. Get behind that long continuing project with your gifts and prayers.
